

Combining people and technology for excellence

PRESS RELEASE

Full Roller Rockers - A Series

Jack Knight Developments are now able to offer an improved lightweight performance set of roller rockers. The roller rocker set is available in high lift ratio with full roller bearings and tips. The option to have a bush type rocker is also available at a lower cost for the budget rebuild.

For more information and advice contact Jack Knight Developments sales team.

4 Speed Dog Box

The existing involute dog-tooth engagement design has undergone extensive research and testing to incorporate innovative design and JKD standards. The reduction in teeth has invariably made gear engagement faster, quieter and smoother. The new design has lightened the transmission while retaining the essential strength needed during transfer.

Twin Pin Differential

The twin pin differential is the recommended differential for the performance road car. The standard differential is a weak link for uprated engines, with expensive rebuilds. JKD can now offer the twin pin differential for the performance road car at a competitive price. For more information and advice contact Jack Knight Developments sales team.
