

Combining people and technology for excellence

PRESS RELEASE

Modular Power Steering

Jack Knight Developments are now able to offer a modular power steering solution for performance road cars. The components used have been developed to optimise cost and quality. To ensure Jack Knights reputation in providing high standards and design solutions are not compromised, steering assemblies have undergone stringent and rigorous testing. The modular approach is now available, for more information and advice contact Jack Knight Developments.

Lightweight Pinion Valve

JKD have been developing a lightweight version of our popular pinion valve to be used in performance road and racing applications. The valve characteristics have been developed over the years for optimal characteristics. The pinion can be manufactured to suit all types of rack and housing specifications. JKD can provide a consultancy service to help during the design stage.

Racing Pinion Valve

JKD are pleased to announce the introduction of a pinion valve reduced in size to be used in racing applications. We are now able to offer an affordable solution to teams pushing the boundaries and standards of their racing cars.

The valve characteristics have not been compromised with a reduction of 40mm being saved on the pinion itself. For more information contact a member of the JKD design team on 01483 764326
